 AB - JP2000248000 NOVELTY - A differentiation promoter to a nervous system cell of a nerve progenitor cell contains fusion proteins of an interleukin-6 receptor and an interleukin-6 as an active ingredient.  
 - DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a nervous system cell differentiation promotion of the nerve progenitor cell involves administering the nervous system cell differentiation promoter.  
 - USE - As specialization promoter to nervous system cell of nerve progenitor cell like astrocyte.  
 - ADVANTAGE - Differentiation promotion activity is effective to nerve progenitor cell in nervous system cells.
